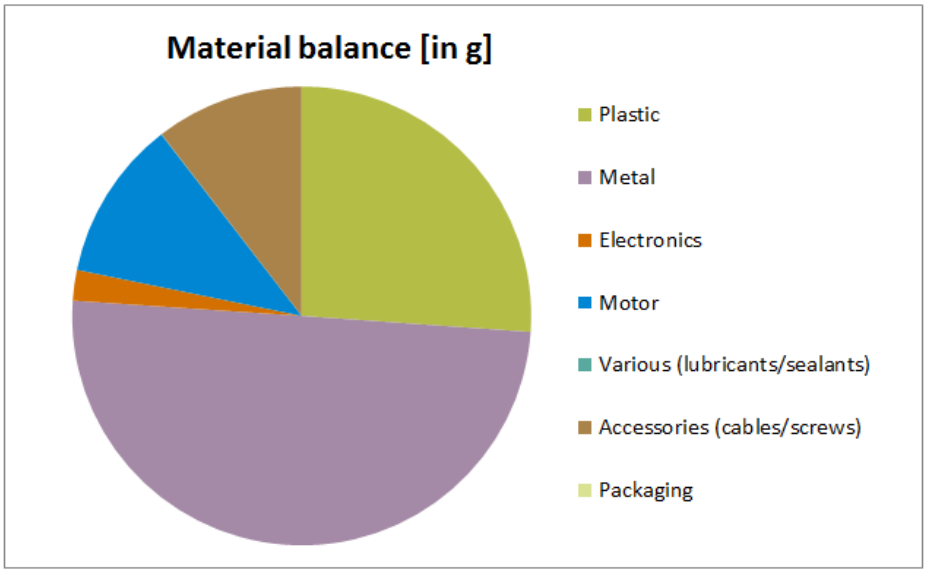
Note

The following materials balance and the calculation of the environmental impact relate to type AVM215SF132R.

Materials balance



Energy requirement in the utilisation phase

Power requirement for component

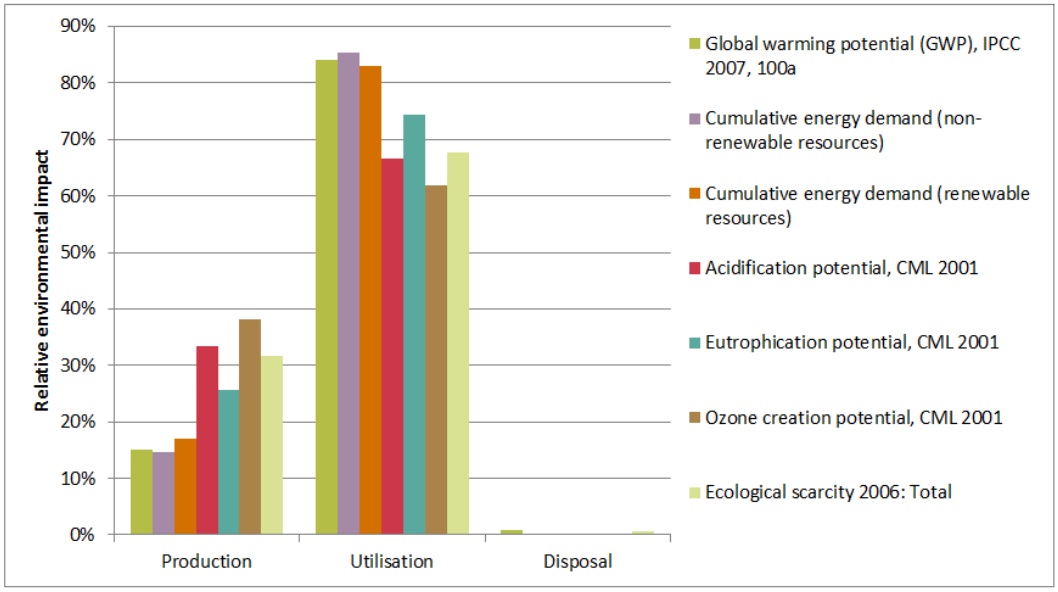
Minimum power consumption	0.45	W
Average power consumption	2	W
Typical energy consumption per year	8.4	kWh

The energy requirement evaluation was performed for a typical utilisation scenario. The European electricity mix from ecoinvent 2.2 was used to evaluate the power consumption in the utilisation phase.

Calculation of the environmental impact

Evaluation over the entire life stage of 8 years in a typical utilisation scenario. The results shown are based on a method of ecological scarcity that combines various environmental effects into an “environmental impact points” key figure. The method is based on Switzerland’s environmental targets and evaluates the individual effects depending on the “Distance to Target”.

Indicator	Unit	Production	Utilisation	Disposal	Total
Global warming potential (GWP), IPCC 2007, 100a	kg CO2 eq.	6.6	36.8	0.3	43.7
Cumulative energy demand (non-renewable resources)	MJ eq.	128	745	0.6	873
Cumulative energy demand (renewable resources)	MJ eq.	11.6	56.5	0.02	68.1
Acidification potential, CML 2001	kg SO2 eq.	7.61E-02	1.52E-01	1.86E-04	2.28E-01
Eutrophication potential, CML 2001	kg PO4-- eq.	4.15E-02	1.20E-01	1.39E-04	1.62E-01
Ozone creation potential, CML 2001	kg C2H4 eq.	3.76E-03	6.10E-03	7.26E-06	9.86E-03
Ecological scarcity 2006: Total	UBP	17'510	37'500	320	55'400



The relationship of the contributions made by the utilisation in comparison to those made by the reduction and disposal depends on the intensity of the utilisation (utilisation scenario).

Disposal	**Product:** The device must be disposed of as waste from electrical and electronic equipment (electrical/electronic scrap) and must not be disposed of as household waste. This applies in particular to the assembled PCB. Special treatment for special components may be compulsory by law or may make ecological sense. **Packaging:** Recyclable The local and currently valid laws (WEEE2012/19/EU) must be observed. **Special information:** None
Remarks	**(1) Depending on the fire load for the type:** AVM215SF132R 7.7 MJ **(2) Depending on the weight of the type:** AVM215SF132R 926 g
How the environment benefits	With these products we make a significant contribution to energy savings in buildings and to reducing global warming. In the Green Building area, our products ensure that customer requirements are fulfilled optimally and that there is cost efficiency over the entire building life-cycle. (Alternatively……a place for specific technical advantages)
Extent of applicability	This declaration is an environmental declaration based on ISO 14025 and describes the environmental impact of the product over its entire life stage. The declaration is made in a compact form without an external check or registration. The data gathered with existing data inventories for production processes has been evaluated from the ecoinvent 2.2 European database. For the determination of the energy requirement during the utilisation phase of the product, standard HVAC applications and average climatic conditions in Switzerland were assumed, based on the ecological accounting for the corresponding product group.

Disclaimer: This declaration is for information purposes only.

Deviations from the information it contains can occur without notification. Fr. Sauter AG explicitly rules out any liability for any consequences that may result due to the above information.

Your local SAUTER representative will provide further information on environmental aspects, and specifically on disposal.
